**PECULIARITIES OF ACCENTED ENGLISH SPEECH PERCEPTION
DURING SIMULTANEOUS INTERPRETATION**

Abstract

This article focuses upon the peculiarities of the English language as a language of many conferences in Asia-Pacific. Accented speech provides rich material for studying the cognitive processes that underlie adaptation to a foreign accent. This article presents the research results of possible and really challenging for perception and simultaneous interpretation issues of language interference in the interaction of English and Oriental languages (Chinese, Japanese, and Korean) that function on segmental and prosodic levels: consonant substitutes, segment insertion and elision, word-stress shift, unstressed syllable lengthening.

Keywords: perception, accented speech, cross-cultural communication, perceptual base, mental lexicon.
