Representation of the category of temporal localization in journalistic writing

Abstract
The article considers the category of temporal localization as a functional-semantic field with its own means of expression. The functional-semantic field of temporal localization includes the categories of the temporal localizing (L) / non-localizing (NL) of action existing in the Russian language which has its own typology and functional implementation. The purpose of the article is to identify and analyze the main means of representing the category of temporal localization, as well as the semantic and functional features of its implementation in mass media texts. The material for the research was the news texts of regional sites. As the first result, 7 major types of temporal L and 3 major types of temporal NL have been determined. Secondly, the means of expressing these categories, particularly, the interaction of components belonging to different levels of the language, and their functional and semantic features implemented in mass media texts, particularly, reference to concrete time, have been established. Finally, temporal L turned out thrice more frequent than temporal NL.

Keywords: category of time, functional-semantic field, functional-semantic category, category of temporal localization, point localization, linear localization, category of temporal non-localization, simple repetition, usability, temporal generalization, mass media texts
